

CARTA DEL EDITOR

REVISTA MEXICANA DE
INGENIERÍA BIOMÉDICA

Vol. XXXII, Núm. 1
Julio 2011
p 5

Dear members of the National Biomedical Engineering community, as usual, this new Journal issue represents a remarkable effort from the authors to obtain a final scientific product of high quality.

Once again, I really appreciate the contributions sent by the Mexican researchers that still trust on the Mexican Journal of Biomedical Engineering. The joint work performed by authors, editorial board and the SOMIB directive panel has paid an important benefit: our journal has been included again in the so-called High Quality Index for Scientific Journals. Actually, this is a great new. I hope, this fact encourages the submission of new contributions from different authors.

In particular, I hope the number of papers received from now and go on will increase. In particular, I want to invite PhD students to submit partial and final results developed within your thesis. The national community related to Biomedical Journal is expecting to hear what you have to offer. As an example, in this number, different papers show how several emerging biomedical engineering topics are appearing as new disciplines.

Based on the aforementioned aspects, the editorial board of the Mexican Journal of Biomedical Engineering solicits proposals for special issues regarding the technical scopes considered in this

journal. To make this proposal, please contact to the editor in chief through the email rmib.somib@gmail.com.

On the next October, the National Congress on Biomedical Engineering will be held on Ixtapa, Guerrero, Mexico. The editorial board of this journal encourages to all Mexican researchers to attend it. This event is the most important scenario where new ideas on Biomedical Aspects are showed. Technical exchanges within the research community will encompass keynote lectures, special sessions, tutorials and workshops as well as panel discussions. In addition, participants will be treated to a series of social functions, receptions, and networking to establish new connections and foster everlasting friendship among fellow counterparts. Extended versions of best papers will be considered to construct as special issue of this Mexican Journal.

Finally, I want to express my gratitude to those who contribute to the Mexican Journal of Biomedical Engineering.

Sincerely

Dr. Jorge Isaac Chairez Oria
Editor in Chief
